

Project Description

Title: ComfortRide: Transport perfectly fitted for your needs

Description: The ComfortRide app registers managers, costumers, drivers, rides and vehicles. Customers can book a ride for their desired location, date and time. The app will then match a driver to the booking. The costumer will be asked whether their own car should be used or a vehicle from the ComfortRide fleet. To ensure quality for both client and driver, a quotation system through reviews is put in place based on previous rides.

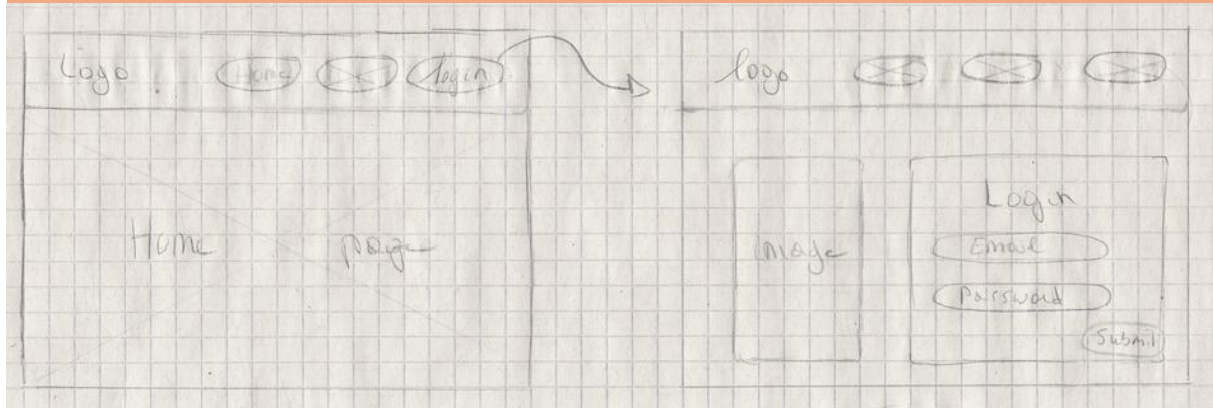

User story – Manager login

As a manager

I'm able to log in as a manager

So that I can access everything accessible for a manager

Wireframe

Acceptance criteria

- In the navigation bar a log in button is shown
- When clicking the log in button, the log in tab is displayed
- A manager can login with their credentials, user-email and password
- When the given user does not exist, display "user not registered"
- When the user exists but the password is false, display "wrong password"

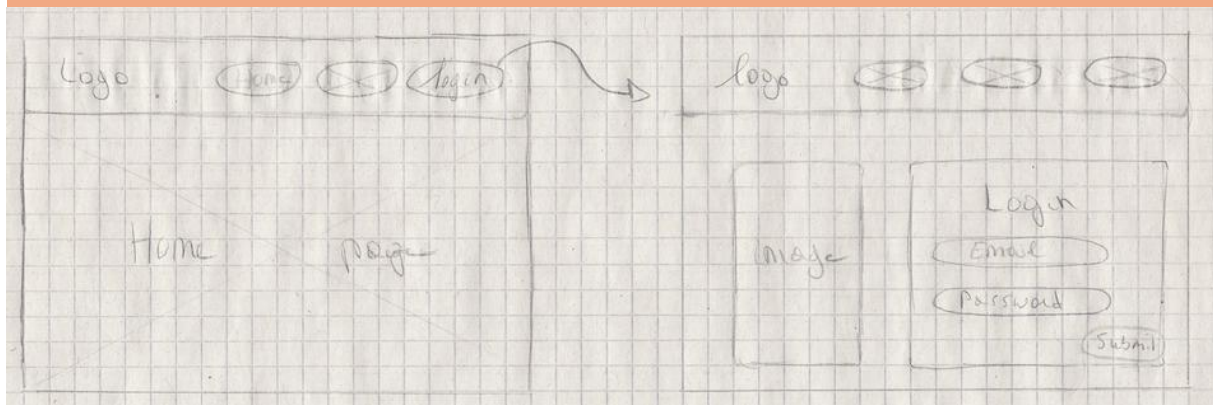

User story – Driver login

As a driver

I'm able to log in as a driver

So that I can access everything accessible for a driver

Wireframe

Acceptance criteria

- In the navigation bar a log in button is shown
- When clicking the log in button, the log in tab is displayed
- A driver can login with their credentials, user-email and password

- When the given user does not exist, display “user not registered”
- When the user exists but the password is false, display " wrong password”

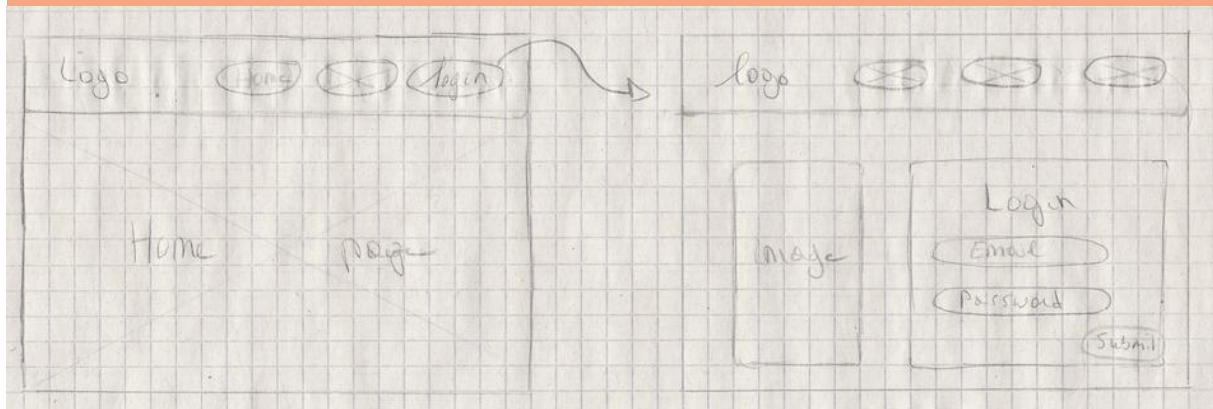

User story – Customer login

As a customer

I'm able to log in as a customer

So that I can access everything a customer needs

Wireframe

Acceptance criteria

- In the navigation bar a log in button is shown
- When clicking the log in button, the log in tab is displayed
- A customer can login with their credentials, user-email and password
- When the given user does not exist, display “user not registered”
